## INDUSTRIAL SALES

### PRODUCTS, ENGINEERING, SERVICE & AUTOMATION SOLUTIONS

# OPTO 22

Automation made simple.

*Controllers, I/O, solid-state relays, and software products that link devices to networks and computers.*

## Emphasis on Quality

Opto 22 I/O, controllers, and SSRs are famous for their quality and reliability. Customers often comment about their dusty, 20-year-old "Optos" still doing the job in the back of a factory somewhere.

## Open Standards

Opto 22 products are designed to run on non-proprietary communication standards like Ethernet and the Internet Protocol, decreasing the cost of automation and opening up data where it's needed.

## Made in the U.S.A.

Because all Opto 22 products are manufactured and individually tested at their headquarters in Temecula, California, they can control quality from the ground up.
